Art Unit: 3711

## Election/Restrictions

1. Claims 1-5 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on December 5, 2004.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 6-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jasperson (5,749,799) in view of Tubbs (2,318,115). Regarding claim 6, Jasperson discloses a playball comprising a transparent sphere (10) having a liquid (13) therein and a sealing device (14) for inserting the liquid. The sealing device of Jasperson shows a tapered insertion portion buried in the surface layer and appears to show an imbedding portion in the surface layer, however, Jasperson lacks the teaching for the top of the sealing portion to have a diameter greater than the imbedding portion.

Tubbs reveals a valve construction for a playball (note Figures 3 and 6) for inserting a liquid into the ball comprising a tapered inserted portion (noted generally at 17), an imbedding portion (15) of the same thickness as the surface layer (28) and a sealing portion (18) having a diameter greater than the imbedding portion. It would have been obvious to one of ordinary skill in the art to provide the sealing device of Jasperson with the construction taught by Tubbs in order to provide a sealing device that would not easily be pushed into the hole in the ball.

Art Unit: 3711

Regarding claim 7, it would have been obvious to one of ordinary skill in the art to form the ball of Jasperson from polyurethane in order to take advantage of that material's well known physical characteristics.

Regarding claims 8 and 9, Jasperson teaches filling the ball with oil and a syrup (15). The syrup forms rivulets  $(R_a, R_b, R_c)$  in the fluid. These rivulents are seen as ornaments.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven Wong whose telephone number is 571-272-4416. The examiner can normally be reached on Monday through Friday 7am-3:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Greg Vidovich can be reached on 571-272-4415. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
